

# Protect Your System Against the Most Recently-Detected Threats

## *Your ability to detect cyber-threats is only as good as your threat intelligence*

You can't protect yourself against threats you're not aware of. And with new malware and other cyber-threats constantly developed and detected, the only way to assure proper protection is to maintain awareness to the latest-discovered threats.

To this end, Radiflow has teamed up with the MER Group Cyber & Intelligence Unit to keep its ICS monitoring solutions continuously up-to-date with the most comprehensive data-set of newly-detected threats, derived from contextual analysis of both open sources and the DarkNet, including:

- ▶ Actors: contextual information on adversaries, e.g. organized crime and hackers, along with their motivations and intents
- ▶ Intelligence about significant threats and attacks
- ▶ Published vulnerabilities and exposures
- ▶ List of malicious indicators for blacklisting
- ▶ Actionable advice on mitigating the threats

New threat information is delivered at a speed and format that enables users to take a pro-active approach and transition from reaction to breaches as they happen, into pre-empting attacks.

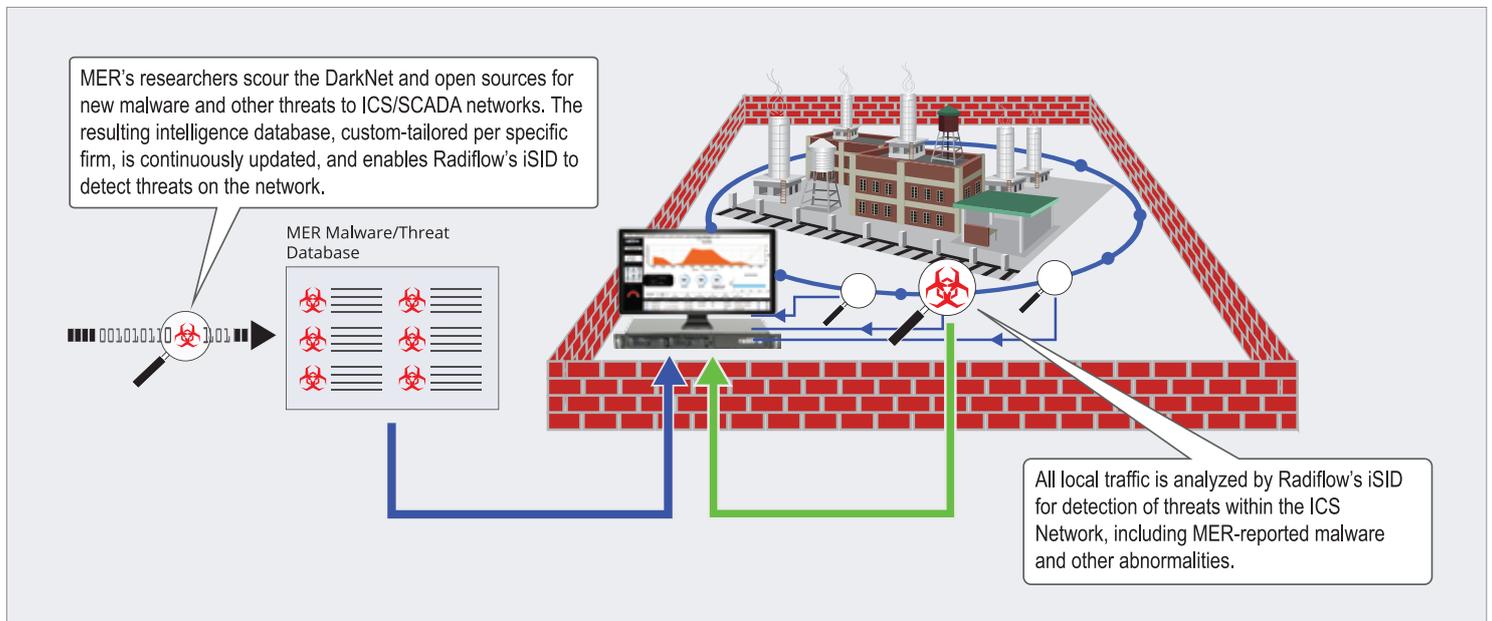

# Protect Your System Against the Most Recently-Detected Threats

## Radiflow Cybersecurity for ICS Networks

- ▶ Network visibility: highlight new entities based on passive-scan self-learning of the SCADA network
- ▶ Policy monitor: unique DPI firewall rules on every link; dynamic firewall rules during specific times
- ▶ Anomaly detection: detection of abnormal activity in comparison with the normal baseline
- ▶ Maintenance management: centralized planning and auditing of remote sitemaintenance sessions
- ▶ Signature-based detection of known attacks, PLC vulnerabilities and known protocol vulnerabilities

## MER Threat Intelligence Services

- ▶ Tailor-made threat intelligence: customized to the specific needs of the customer
- ▶ Beyond raw data: rich contextual information analyzed by security and intelligence specialists.
- ▶ Vast experience in cyber warfare & intelligence
- ▶ Significant ROI: providing accurate, contextual intelligence on real threats to the organization, allowing optimal utilization of security resources
- ▶ Actionable advice: prioritized reports and actionable mitigation recommendations

## About Radiflow

Radiflow was founded in 2009 as part of the RAD group, a family of ICT vendors with over \$1Bn in annual revenues. Radiflow's security solutions, introduced in late 2011, have been successfully deployed by major utilities world-wide, and validated by leading security research labs. Radiflow's solutions are sold both as components within global automation vendors' integrated end-to-end solutions, and as standalone security solutions by local channel partners.

## About MER Group

Established in 1948, the MER Group (TASE: CMER) is one of Israel's leading holding companies, with a diverse portfolio in communications infrastructure, intelligence, cybersecurity, big data, smart & safe cities and campuses, emergency services and more. MER Group offers a wide range of end-to-end solutions including consulting, developing, manufacturing Integrating and implementing technology-based solutions. The MER Group employs about 1,200 experts, manages dozens of global subsidiaries, and operates throughout Latin America, Africa and Israel.
